TITLE : CATIONIC POLYMER

ABSTRACT : PROBLEM TO BE SOLVED: To provide a novel cationic polymer that forms a composite with an anionic surfactant being a component of a detergent, manifests excellent conditioning properties when rinsing, further is not bulky after drying, and gives highly flexible composite film.

SOLUTION: The cationic polymer comprises (A) a polymerizable monomer having a quaternary cationic group and (B) a copolymer with a polymerizable monomer having a polyoxyethylene chain, and the nitrogen content in the polymer is 0.5-6% by mass to the total weight of the polymer.
